

Part Number: ENV-AS2

Description

ENV-AS2 - RS-Wi analog input transmitter (0-5vdc) sensor. Battery operated 12 bit analog-to-digital converter, microprocessor-controlled 418 MHz FCC certified radio transmitter.

RS-Wi sensors spend most of the time in a low power, "sleep" state. The onboard microprocessor requires power only at predetermined time intervals (set at the factory). Sensors provide an output signal and the information is wirelessly transmitted to a point managing receiver (RS-Wi wireless gateway). This architecture allows the sensors to consume minimal power, resulting in a battery life of up to four years.
